Study Questions:

1. In blind signature schemes, which algorithm from `(KeyGen, Blind, Sign, Unblind, Verify)` is deterministic? What does deterministic mean, and why is this algorithm deterministic? (Explain it in a high-level concept or use a counterfactual to demonstrate your reasoning.)

2. What is a commitment scheme? (Explain in plain words) And why is it useful in the context of voting?

3. How are threshold decryption schemes different from the traditional encryption scheme? Why are threshold encryption schemes useful in voting?
